Product Description

Easy Maintenance Diesel Engine Fire Fighting Pump Portable Diesel Fire Pump

The portable fire pump is a lightweight and easy-to-carry fire pump suitable for some special or complex fire emergency scenarios. The following are some application scenarios for portable fire pumps:

1. Fire Fighting on Ships and Vessels: On ships and vessels, portable fire pumps can serve as backup fire-fighting equipment. They can be easily carried to various areas of the ship to provide an emergency source of water and high-pressure water flow for extinguishing fires on board.
2. Fire extinguishing in tunnels and underground spaces: Portable fire pumps play an important role in extinguishing fires in underground spaces such as tunnels, underground parking lots or underground passages. Since these areas are often inaccessible or lack water sources, portable fire pumps can provide emergency water sources and high-pressure water flow to support firefighters in firefighting operations.
3. Traffic Accidents and Rescue: Portable fire pumps can also be used in traffic accident and rescue scenarios. When it is necessary to quickly rescue trapped persons or control a fire, portable fire pumps can provide high-pressure water flow to extinguish fires or provide water for rescue operations.
